Christopher Goodale

Analytics · Credit & Financial · Quantitative Modeling

Chicago, IL | (630) 397-9811 | christophergdale@gmail.com | LinkedIn: Profile · GitHub: Profile

TECHNICAL SKILLS

Languages: Python, SQL, R, JavaScript, Node/Express, React

Data & Warehousing: Oracle, PostgreSQL, Amazon Redshift, SAP S/4HANA, ETL / ELT pipeline design

Analytics & ML: Time-series forecasting (ARIMA), anomaly detection (isolation forest), embedding / nearest-neighbor similarity search, A/B testing & MDE design, statistical analysis

BI & Visualization: Tableau, Power BI, Streamlit, Excel (advanced)

Cloud & Tooling: AWS, Docker, Git, Linux, JIRA, Confluence

Applied AI: Claude Code, Claude Skills, AI agent workflows

Enterprise / ERP: SAP, Workday, NetSuite, MIP, Sage Timberline

PROFESSIONAL EXPERIENCE

Above Lending

Strategic Business Analyst (Credit & Financial) - Feb 2026 - Aug 2026

- Built the metrics package underpinning a new external debt facility, covering time-to-onboard by channel and risk tier, onboarded / eligible and applied / eligible curves, autopay penetration, and payment-method mix, establishing the analytical backbone of an active external financing conversation.
- Built decomposition and bridge analyses for two major initiative launches, isolating throughput change into pay-shock mix, re-entry timing, and eligibility fallout, providing leadership with a driver-level verdict instead of a single blended number.
- Designed a tenure-banded new-agent hiring-class framework and drove it into production Tableau dashboards, replacing a coarse veteran-vs-new cut and enabling ops leadership to detect conversion drag in the weekly Originations meeting.
- Built a Streamlit application tracking newly launched dialer segments against target, giving the business a live performance view that directly informs dial-expansion scoping decisions.
- Ran a time-of-day dialing test against a pre-set minimum detectable effect and reported a clean null result, closing off a proposed optimization the data did not support and saving the org from building logic that would not have paid off.
- Scoped and directed four BI dashboard enhancements executed by another analyst, specifying requirements clearly enough to delegate, scaling output beyond individual hours.

International Motors (formerly Navistar)

Financial Systems Consultant - Dec 2024 - Feb 2026

- Proposed and designed an isolation-forest anomaly-detection framework to proactively flag fraudulent or erroneous general ledger entries, strengthening compliance and data integrity.
- Drove the design of an enterprise financial data model through cross-functional collaboration with consultants and subject matter experts across SAP S/4HANA and Oracle EPBCS, establishing foundational analytical capability for financial planning.
- Built an embedding-based similarity model with nearest-neighbor search to quantify differences across roughly 120,000 vehicles, generating data-driven model recommendations at scale.
- Collaborated with cross-functional finance and IT stakeholders in an Agile cadence, translating complex reporting needs into prioritized epics, user stories, and sprint deliverables.
- Developed implementation strategies that carried complex financial data models from design into operational use, enabling enhanced financial oversight.

Lessen Inc.

Business Analyst - Apr 2022 - Nov 2024

- Built a Python ARIMA model predicting busy-season work-order volume by client and region, visualizing the output in a Tableau workbook for 800+ employees, which management uses at the end of Q1 to set seasonal hiring and forecast resourcing needs.
- Designed and administered an automation server supporting 30+ analysts across the four largest departments

nationwide, running 300+ scripts to deliver client and operations reports, build datasets, and execute analyses.

- Developed a method assigning costs to employee-completed tasks, resolving a long-standing budgeting gap and letting each department compare contractor cost against contractor-generated revenue and project next-year costs.
- Built an overview and feedback system for Market Managers that lifted the average service rating from 4.32 to 4.70 against a 4.4 goal, establishing a measurable operations improvement.
- Automated Workday payroll-to-GL reconciliation to cut month-end adjustment time, and implemented real-time Power BI, Tableau, and Workday dashboards tracking labor cost, payroll liabilities, and department budgets.
- Delivered data-driven market analysis to the C-suite, directly informing regional-expansion and resource-allocation investment decisions.

AHS Family Health Center

Accounting Analyst - Mar 2021 - Apr 2022

- Detected $3M of misallocated funds and delivered corrected entries after determining where and when the money should have been recorded, recovering the amounts for accurate reporting.
- Designed an ETL process for month-end close that reduced AP / AR closing time by 40% while maintaining GAAP compliance, standardizing a previously manual workflow.

PROJECTS

Prediction-Market Arbitrage Research System (Personal)

- Architected a research system targeting Kalshi and Polymarket mispricings, including YES+NO pricing off 100c, mutually-exclusive outcome sets off 100c, and cross-venue price divergence, through pure, backtest/live-shared detector functions that walk every reported edge through real order-book depth and venue fee schedules rather than top-of-book quotes, establishing a rigor-first foundation before any capital is put at risk.

SEC Filing Data Pipeline (Personal)

- Built a reproducible Python pipeline of roughly 2,800 lines across 13 modules with 68 passing unit tests, pulling SEC EDGAR XBRL filings via the `companyfacts` API, validating them against 11 automated accounting-identity checks, and rendering a three-statement model into Google Sheets as live formulas, ensuring extracted data is trustworthy before it reaches a model.

EDUCATION & CERTIFICATIONS

Northern Illinois University - B.S. in Accountancy

Northwestern University - Full Stack Development Certification

Google - Advanced Data Analytics Certificate
